

For climate protection. Let's preserve old windfarms!

Wind energy is a key component of the energy transition in Germany. However, the construction of new wind turbines runs sluggish, and in 2021 the first approx. 6,000 turbines will no longer receive a fixed feed-in tariff under the Renewable Energy Sources Act (EEG). At the same time, owners have to deal with new obligations: they have to prove the safety of the wind turbines by means of expert reports and should consider technical retrofits. This offers new opportunities, but also involve new risks, especially when it comes to marketing of the generated electricity.

As the owner of a wind farm, you have a wide range of options. It is worth to carefully discuss about these options with us as a competent and solid partner in order to select the individually suitable solution.

You want to know exactly?

About ENGIE

ENGIE Group, as a global actor, has set itself the goal of being a carbon-neutral company by 2050 and to accompany its customers - companies and municipalities - on the way to climate neutrality. We invest in renewable energies, in energy-efficient solutions and in the adaptation of infrastructure to the energy transition. With 34 gigawatts installed capacity - thereof 11,3 GW onshore wind, the ENGIE Group is one of the leading players for renewable energies worldwide. From project planning and construction to operation and repowering to full or partial electricity marketing and 24/7 trading. We are represented on all main important European trading platforms and have top credit ratings.

GIVE YOUR WIND FARM A „SECOND LIFE“

New perspectives for your
wind farm after the expiry of the
fixed feed-in tariff.

Now is the right time to set the course for the future of your wind farm

Whether market access, long-term supply contracts or (partial) sale of assets: ENGIE offers the product that fits your risk tolerance

We conjointly develop the best solution in a detailed discussion with our customers.

ENGIE Wind farm control center

Power Purchase Agreements instead of Feed-in Tariffs (EEG)

Would you like to continue operating your wind farm by yourself with predictable revenue?

If so, a long-term Power Purchase Agreement („PPA“) with ENGIE is the right choice.

You obtain financial planning reliability for the next few years via a fixed price or you benefit from higher market prices via index-based pricing related to the spot price.

As one of the largest electricity market players, ENGIE offers flexible structures considering your risk tolerance.

You benefit from ENGIE's experience with PPAs across Europe for your wind farm.

Technical and commercial management remain under your control. You undertake the dismantling of the turbines by yourself.

Realizing profit instead of investing

You do not want to bear the risk and complexity for a continued operation?

We buy your old wind turbines and keep them in operation at the same site.

Your advantages:

- You do not assume any marketing risk.
- You can hand over your responsibility as a plant operator.
- You do not have to worry about technical retro-fitting, such as Aircraft Detection Light System (ADLS) according to requirements.
- You do not need taking any efforts for the necessary continuation of operations report.
- You do not have any technical and therefore no cost risk, as well as any dismantling costs.
- You realize your profit and are released from all further obligations.
- Your wind farm remains available for climate protection.
